Edwin E. Cazares Flores

Computer Science | Software Engineer Undergraduate

Profile

Computer Science student working toward a Software Engineering career, with hands-on experience as a Lead Repair Technician. I'm used to troubleshooting problems, figuring things out step by step, and working with both hardware and software. Right now I'm focused on building my programming skills and working on personal projects while I keep learning. I'm looking for an opportunity to grow into a software role where I can keep improving and start contributing to real-world applications.

Projects

I'm currently building these projects to strengthen my programming skills and start creating real-world applications. My goal is to keep learning, stay consistent, and grow into a software engineering role.

Planned Project: Simple Game Application

I am currently planning and working on building a small game as a personal project to strengthen my programming skills and understanding of logic. The goal is to develop a simple interactive game (such as Tic Tac Toe or Snake) using Python or JavaScript, focusing on core concepts like problem-solving, user interaction, and basic game mechanics.

Planned Project: Repair Tracking System

I am also planning to build a simple repair tracking system inspired by my current role as a Lead Repair Technician. This project will allow users to track units, update repair status, and store notes for each job. The goal is to create a practical tool that reflects real-world workflows while improving my skills in software development and data handling.

Work Experience

Lead Repair Technician with hands on experience diagnosing, repairing, and testing electronic systems, specializing in law enforcement radar equipment. Responsible for troubleshooting complex issues, managing repair workflows, and ensuring units meet performance standards before returning to customers. In addition to my primary role, I have experience building and managing websites and simple applications for churches using platforms like Base44 and Wix, helping improve communication and organization. I also have prior experience in networking installations, including setting up access points and switches, as well as a background in computer repair working with desktops, servers, and general hardware troubleshooting. These experiences have strengthened my problem solving skills, adaptability, and ability to work across both hardware and software environments.

Current Role: Lead Repair Technician

Decatur Electronics

04/2024 - Present

Currently working as a Lead Repair Technician, responsible for diagnosing, repairing, and testing law enforcement radar systems. I handle the full repair process from initial assessment to final testing, making sure each unit meets performance standards before being returned to the customer. I also communicate directly with clients to provide updates and explain repair findings. This role has helped me build strong troubleshooting skills, attention to detail, and the ability to stay organized while managing multiple repairs at the same time.

Skills Section:

- Troubleshooting & Problem Solving
- Electronics Diagnostics & Repair
- Hardware & Software Integration
- Basic Programming (Python, JavaScript)

- Web Development(HTML, CSS, Wix, Base44)
- Version Control (Git & GitHub – beginner)
- Networking (Access Points, Switches Installation)
- Computer Repair (Desktops, Servers, Hardware)
- Attention to Detail
- Communication & Customer Support

Education

Southern New Hampshire University

Bachelor of Science in Computer Science | Concentration in Software Engineering, 2024-Present

Relevant Coursework: Programming, Data Structures & Algorithms, Database Management, Software Development,Problem Solving & Logical Design, Mathematics for Computing.
